

ABSTRACT

A photosensitive resin composition comprising (A) a binder polymer, (B) a photopolymerizing compound with at least one polymerizable ethylenic unsaturated group in the molecule and (C) a photopolymerization initiator, wherein component (B) contains a compound represented by the following general formula (2).

[Chemical Formula 1]

(wherein the three R¹ groups each independently represent hydrogen or methyl, the three X groups each independently represent C2-6 alkylene and i, j and k each independently represent an integer of 1-14.)
